finally found uneasy sanctuary in Morocco at the western end of the lands to which Islam had spread to that point in time. In 755, the 24-year-old crossed the narrow Straits of Gibraltar that separated north Africa from the Iberian peninsula. Rallying to his cause several hundred Syrians, whose homelands had been the mainstay of the vanquished Umayyad dynasty and who had joined in earlier Arab-Berber campaigns to conquer the peninsula, 'Abd al-Rahman began his quest to become master of Iberia.

Despite continuing resistance by rivals and rebels from within and invasions plotted by Abbasid rulers in distant Baghdad, 'Abd al-Rahman steadily consolidated his control over Iberia. His early victories, particularly the capture of Córdoba in 756, secured his position as the paramount lord on the peninsula within years of his arrival. In the following decades as the capital of a flourishing Muslim kingdom, Córdoba grew rapidly into one of the most cosmopolitan and celebrated cities in the Mediterranean world. Córdoba boasted well-paved and well-lit streets, houses with running water, one of the world's finest universities, and a library with over 400,000 volumes at a time when the largest collections in Christian Europe contained a few thousand at best. But Córdoba's crowning glory was its great mosque. It was famed for its hundreds of splendid marble columns topped by ornate horseshoe arches and its elaborately decorated vaulted ceilings, shown in Figure 7.1. But even more remarkable than its distinctive architecture and decoration were the ways in which the mosque encapsulated the exceptional synergy generated by cooperation among and the blending of the diverse peoples and cultures that came together in Islamic Spain.

Like the development of Muslim civilization more generally, the construction of the great mosque of Córdoba owed much to earlier and even contemporary rival civilizations. It was built on the ruins of a Christian church, and many of the pillars that supported the signature horseshoe arches were taken from Roman ruins. And although the influence of Syrian-style Islamic architecture is apparent, the mosque's bell tower and thick walls decorated with geometric stone carvings shared key features with the Romanesque churches then found throughout Latin Christendom. Much of the mosque's stonework, and especially its intricate mosaics, were crafted by Christian Orthodox artisans from Constantinople, and its architects, laborers, and overseers were drawn from Arab and Berber Muslim migrants as well as the majority Christian population of Iberia.

The cross-cultural influences and interethnic and religious cooperation that played such vital roles in the construction of the grand mosque of Córdoba were also prominent features of Muslim Iberian society as a whole. Under the Muslims the peninsula became a key locus for the transmission of ideas, technology, and material culture between the Middle East, north Africa, and Europe. Arab and Berber migrants brought paper (originally invented, as we have seen, in China) and refined steel working to al-Andalus (the Arab name for Iberia), and their descendants carried leather working skills back to Morocco and the broader Muslim world. Muslim migrants to Iberia also introduced sophisticated irrigation systems and a wide variety of staple foods and plants, including oranges, sugar cane, and cotton.

Jews and Christians, as "people of the book" were allowed in Iberia as in the rest of the Muslim world to worship openly, to regulate their everyday lives according to their own laws, and to collaborate with Muslims in trade, scholarship, and the arts. Arab and Jewish scholars in Córdoba, Seville, and other urban centers, for example, were renowned throughout the Mediterranean for their translations of classic Greek texts. By the tenth and eleventh centuries, their collaboration had become pivotal for the recovery in Latin Christendom of the writings of the great Greek

philosopher and scientist Aristotle in such critical areas as astronomy, mathematics, geography, and meteorology. Muslim Spain was a key source of the tradition of wandering minstrels or troubadours, who carried music, fables, and the notion of romantic love northward into Christian Europe. It was also a land where upper-class, educated Muslim, Christian, and Jewish women flourished as poets, musicians, scribes, and university students. ■

In the chapter that follows we shall see that in many ways Muslim Iberia was a microcosm—albeit a very forward-looking one—of much of the Islamic world in its early centuries. Although spread initially mainly by nomadic camel-herding peoples of Arabia, Islam was from its inception a religion of the towns and trade. Muhammad himself was a successful caravan leader before he began to receive the divine revelations that transformed him into the founder of one of the great world religions. As in Iberia, conversion to Islam as it spread from Arabia was generally peaceful and voluntary, and in the early decades the faithful were, if anything, reluctant to recruit new believers. Even after the new faith came to undergird vast and expansive empires, such as those fashioned by the Umayyads and Abbasids, adherents of other religions based on divinely inspired scriptures—from the Jews and Christians to the Hindus—prayed and practiced their rituals openly, and their communities very often flourished economically. As was the case in Iberia, many of the most brilliant contributions of early Islamic civilization came from the openness of Arabs to borrowing from the ancient civilizations that surrounded the Arab heartlands. The Arabs' absorption and then innovations on the sciences, arts, and technologies of Greece, Rome, Byzantium, Persia, Egypt, India, and China were essential to the rise of the first genuinely global civilization in human history.

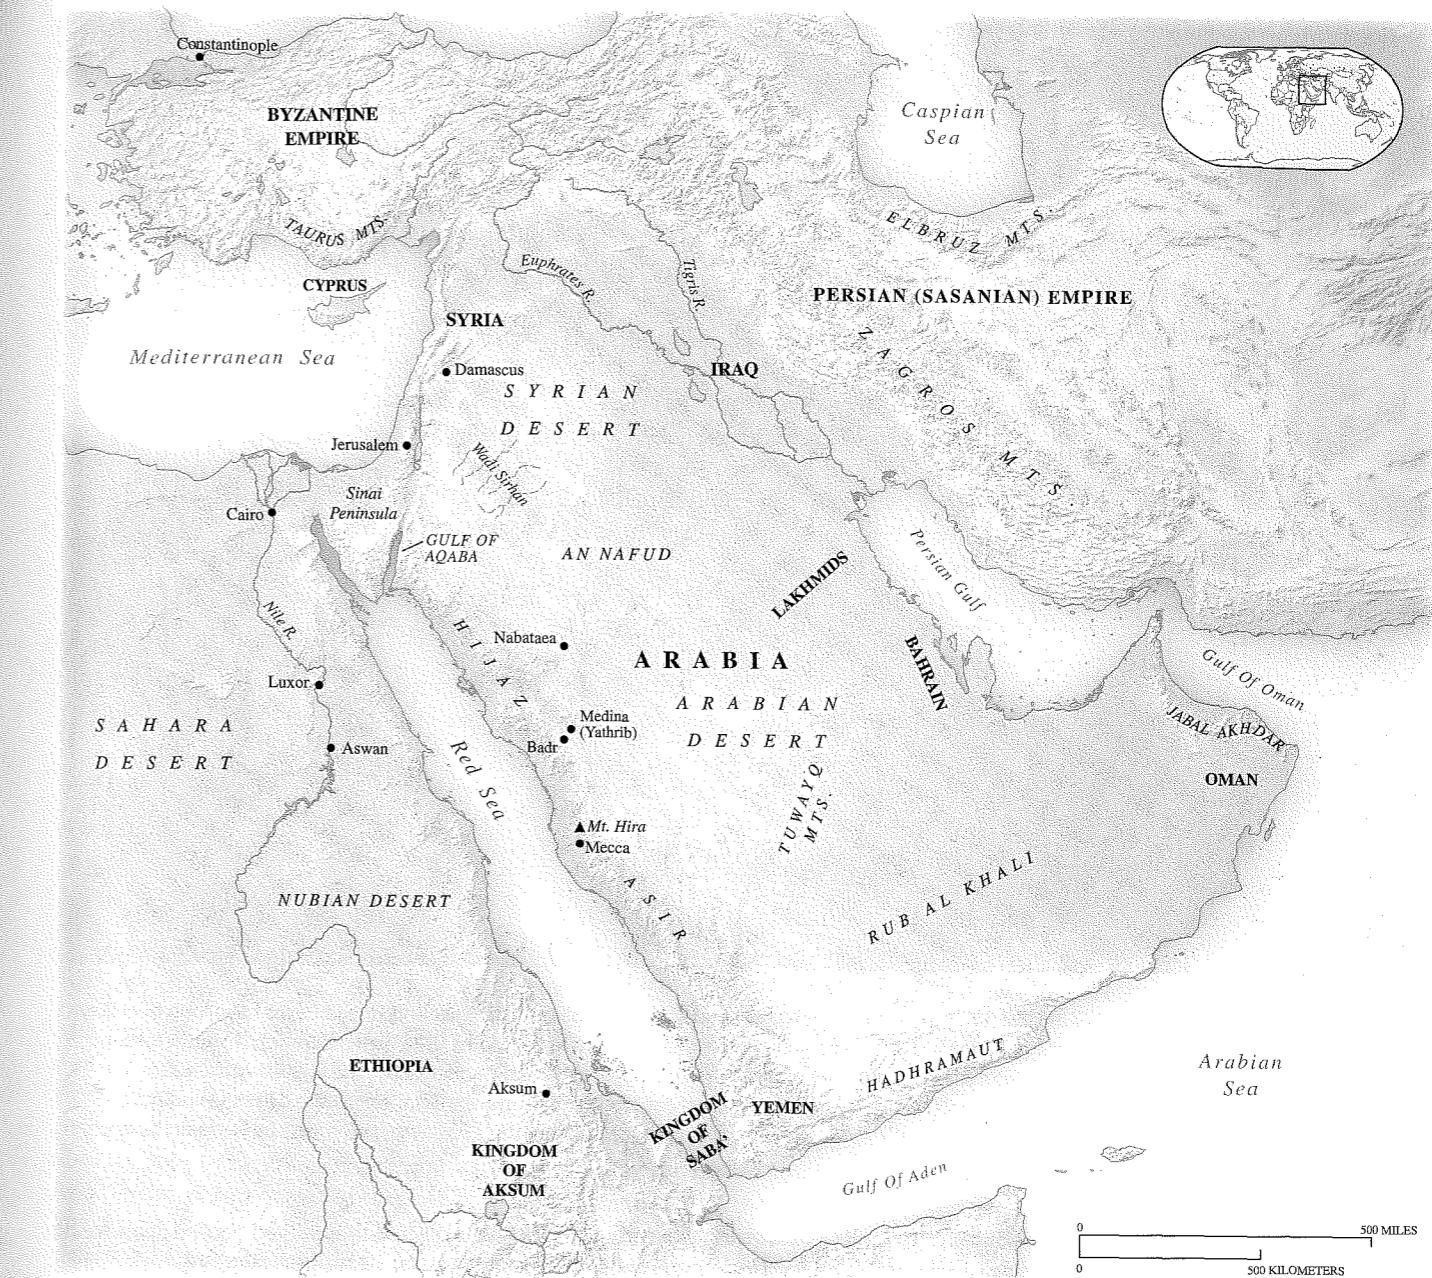

DESERT AND TOWN: THE HARSH ENVIRONMENT OF THE PRE-ISLAMIC ARABIAN WORLD

7.1

What were the major ways in which the city of Mecca interacted with the bedouin tribes that lived in the desert areas around it?

The Arabian Peninsula (Map 7.1) was a very unlikely birthplace for the first global civilization. Much of the area is covered by some of the most inhospitable desert in the world. An early traveler wrote of the region,

Before the rise of Islam, Arabia was a peripheral desert wasteland whose once great trading cities had fallen on hard times. The sparse population of the Arabian peninsula was divided into rival tribes and clans that worshiped local gods.

MAP 7.1 Arabia and Surrounding Areas Before and During the Time of Muhammad Although much of Arabia was separated by vast deserts from surrounding classical civilizations, as the map shows it maintained contact by sea in the west and south and through camel caravans into Palestine and Syria.

All about us is an iron wilderness; a bare and black shining beach of heated volcanic stones . . . a vast bed and banks of rusty and basaltic bluish rocks . . . stubborn as heavy matter, as iron and sounding like bell metal; lying out eternally under the sand-driving desert wind.

In the scrub zones on the edges of the empty quarters, or uninhabitable desert zones, a wide variety of **bedouin** or nomadic cultures had developed over the centuries, based on camel and goat herding. In oases like that pictured in Figure 7.2, which dotted the dry landscape, towns and agriculture flourished on a limited scale. Only in the coastal regions of the far south had extensive agriculture, sizable cities, and regional kingdoms developed in ancient times. Over much of the rest of the peninsula, the camel nomads, organized in tribes and clans, were dominant. Yet in the rocky

Bedouin [BEHD-oo-ihn] Nomadic pastoralists of the Arabian peninsula; culture based on camel and goat nomadism; early converts to Islam.

FIGURE 7.2 With their supply of water, shade, and date palms, oases like this one in Egypt have long been key centers of permanent settlement and trade in the desert. Major towns usually grew around the underground springs and wells or small rivers that fed the oases. Travelers' and traders' caravans stopped at the oases to water their camels and horses and to rest and eat after their arduous treks through the desert. As points of concentration of wealth, food, and precious water, oases were tempting targets for raids by bedouin bands.

regions adjacent to the Red Sea, several trading towns had developed that played pivotal roles in the emergence of Islam.

Although the urban roots of Islam have often been stressed by writers on Muslim civilization, the bedouin world in which the religion arose shaped the career of its prophet, his teachings, and the spread of the new beliefs. In fact, key towns such as Mecca and Medina were largely extensions of the tribal culture of the camel nomads. Their populations were linked by kinship to bedouin peoples. For example, Mecca had been founded by bedouins and at the time of Muhammad was ruled by former bedouin clans. The safety of the trade routes on which the towns depended was in the hands of the nomadic tribes that lived along the vulnerable caravan routes to the north and south. In addition, the town dwellers' social organization, which focused on clan and family, and their culture—including language and religion—were much like those of the nomads.

Clan Identity, Clan Rivalries, and the Cycle of Vengeance

The harsh desert and scrub environment of Arabia gave rise to forms of social organization and a lifestyle that were similar to those of other nomadic peoples. Bedouin herders lived in kin-related clan groups in highly mobile tent encampments. Clans, in turn, were clustered in larger tribal groupings,

but these were rarely congregated together and then only in times of war or severe crisis. The struggle for subsistence in the unforgiving Arabian environment resulted in a strong dependence on and loyalty to one's family and clan. Survival depended on cooperation with and support from kin. To be cut off from them or expelled from the clan encampment was in most cases fatal. The use of watering places and grazing lands, which were essential to maintaining the herds on which bedouin life depended, was regulated by clan councils. But there could be wide disparities of wealth and status within clan groups and between clans of the same tribe. Although normally elected by councils of elder advisors, the **shaykhs**, or leaders of the tribes and clans, were almost always men with large herds, several wives, many children, and numerous retainers. The shaykhs' dictates were enforced by bands of free warriors whose families made up a majority of a given clan group. Beneath the warriors were slave families, often the remnants of rival clans defeated in war, who served the shaykhs or the clan as a whole.

Clan cohesion was reinforced by fierce inter-clan rivalries and struggles to control vital pasturelands and watering places. If the warriors from one clan found those from another clan drawing water from one of their wells, they were likely to kill them. Wars often broke out as a result of one clan's encroaching on the pasture areas of another clan. In a culture in which one's honor depended on respect for one's clan, the flimsiest pretexts could lead to inter-clan violence. For instance, an insult to a warrior in a market town, the theft of a prize stallion, or one clan's defeat in a horse race by another clan could end in battles between clan groups. All the men of a given clan joined in these fights, which normally were won by the side that could field several champions who were famed for their strength and skill with spears or bows and arrows.

These battles were fought according to a code of chivalry that was quite common in early cultures. Although battles usually were small in terms of the numbers involved, they were hard-fought and often bloody affairs. Almost invariably the battles either initiated or perpetuated clan feuds, which could continue for hundreds of years. The deaths of the warriors of one clan required that revenge be taken on the clan that had killed them. Their deaths led in turn to reprisals. This constant infighting weakened the bedouins in relation to the neighboring peoples and empires and allowed them to be manipulated and set against each other.

shaykhs [shAYks] Leaders of tribes and clans within bedouin society; usually men with large herds, several wives, and many children.

Towns and Long-Distance Trade

Although bedouin herders occupied most of the habitable portions of Arabia, farmers and town dwellers carved out small communities in the western and southern parts of the peninsula in the classical era. Foreign invasions and the inroads of bedouin peoples had all but destroyed these civilizations centuries before the birth of Muhammad. But a number of cities had developed farther north as links in the transcontinental trading system that stretched from the Mediterranean to east Asia. The most important of these cities was **Mecca**, located in the mountainous region along the Red Sea on the western coast of Arabia (Map 7.1). The town had been founded by the **Umayyad** clan of the **Quraysh** bedouin tribe, and members of the clan dominated its politics and commercial economy.

The wealth and status of Mecca and its merchant elite were enhanced by the fact that the city was the site of the **Ka'ba**, one of the most revered religious shrines in pre-Islamic Arabia. Not only did the shrine attract pilgrims and customers for Mecca's bazaars, but at certain times of the year it was the focus of an obligatory truce in the inter-clan feuds. Freed from fears of assault by rival groups, merchants and bedouins flocked to the town to trade, exchange gossip, and taste the delights of city life.

Northeast of Mecca was a town named Yathrib (Map 7.1) that later came to be known as **Medina**, or the city of the prophet Muhammad. Like most of the other towns in the peninsula, Medina was established in an oasis. Wells and springs made sedentary agriculture possible. In addition to wheat and other staples, Medina's inhabitants grew date palms, whose fruit and seeds (which were fed to camels) they traded to the bedouins. Medina was also engaged, although on a much smaller scale than Mecca, in the long-distance caravan trade that passed through Arabia. In contrast to Umayyad-dominated Mecca, control in Medina was contested by two bedouin and three Jewish clans. Their quarrels left the city a poor second to Mecca as a center of trade, and these divisions proved critical to the survival of the prophet Muhammad and the Islamic faith.

Mecca City located in mountainous region along Red Sea in Arabian peninsula; founded by Umayyad clan of Quraysh; site of Ka'ba; original home of Muhammad; location of chief religious pilgrimage point in Islam.

Umayyad [oo-MY-yad] Clan of Quraysh that dominated politics and commercial economy of Mecca; clan established a dynasty under this title as rulers of Islam, 661 to 750.

Quraysh [koo-RAYSH] Tribe of bedouins that controlled Mecca in 7th century C.E.

Ka'ba Most revered religious shrine in pre-Islamic Arabia; located in Mecca; focus of obligatory annual truce among bedouin tribes; later incorporated as important shrine in Islam.

Medina Also known as Yathrib; town located northeast of Mecca; grew date palms whose fruit was sold to bedouins; became refuge for Muhammad following flight from Mecca (*hijra*).

Marriage and Family in Pre-Islamic Arabia

Although the evidence is scant, there are several indications that women in pre-Islamic Arabian bedouin culture enjoyed greater freedom and higher status than those who lived in neighboring civilized centers, such as the Byzantine and Sasanian empires that then dominated the Middle East (Map 7.1). Women played key economic roles, from milking camels and weaving cloth to raising children. Because the men of the clan were often on the move, many tribes traced descent through the mother rather than the father. In some tribes, both men and women were allowed multiple marriage partners. To seal a marriage contract, the man was required to pay a bride-price to his prospective wife's family, rather than the woman's father sending a dowry or gift to the prospective husband. Unlike the women (especially those of elite status) in neighboring Syria and Persia, women in pre-Islamic Arabia were not secluded and did not wear veils. Their advice was highly regarded in clan and tribal councils, and they often composed poems that were the focus of bedouin cultural life in the pre-Islamic era.

Despite these career outlets, women were not by any means considered equal to men. They could not gain glory as warriors, the most prized occupation of the bedouins, and often they were little more than drudge laborers. Their status depended on the custom of individual clans and tribes rather than on legal codes. As a result, it varied widely from one clan or family to the next. Customary practices of property control, inheritance, and divorce heavily favored men. In the urban environment of trading centers such as Mecca, the rise of a mercantile elite and social stratification appear to have set back the position of women on the whole. The more stable family life of the towns led to the practice of tracing descent through the male line, and while men continued to practice polygamy, women were expected to be monogamous.

Poets and Neglected Gods

Because of the isolation of Arabia in the pre-Islamic age and the harshness and poverty of the natural environment, Arab material culture was not highly developed. Except in the far south, there was little art or architecture of worth. Even Mecca made little impression on the cosmopolitan merchants who passed through the city in caravans from the fabled cities of the ancient civilizations farther north. The main focus of bedouin cultural creativity in the pre-Islamic era was poetry, which was composed and transmitted orally because there was as yet no written language. Clan and tribal bards narrated poems that told of their kinsmen's heroics in war and the clan's great deeds. Some poets were said to have magical powers or to be possessed by demons. More than any other source, poems provide a vision of life and society in pre-Islamic Arabia. They tell of lovers spurned and passion consummated, war and vendettas, loyalty and generosity.

Bedouin religion was for most clans a blend of animism and polytheism, or the worship of many gods and goddesses. Some tribes, such as the Quraysh, recognized a supreme god named Allah. But they seldom prayed or sacrificed to Allah, concentrating instead on less abstract spirits who seemed more relevant to their daily lives. Both spirits and gods (for example, the moon god, Hubal) tended to be associated with night, a cool period when dew covered the earth, which had been parched by the blaze of the desert sun. Likewise, the worship of nature spirits focused on sacred caves, pure springs, and groves of trees—places where the bedouins could take shelter from the heat and wind. Religion appears to have had little to do with ethics. Rather, standards of morality and proper behavior were rooted in tribal customs and unwritten codes of honor.

How seriously the bedouins took their gods is also a matter of some doubt. Their lukewarm adherence is illustrated by the famous tale of a bedouin warrior who had set out to avenge his father's death at the hands of a rival clan. He stopped at an oracle along the way to seek advice by drawing arrows that indicated various courses of action he might take. Three times he drew arrows that advised him to abandon his quest for revenge. Infuriated by this counsel, he hurled the arrows at the idol of the oracle and exclaimed, "Accursed one! Had it been thy father who was murdered, thou would not have forbidden my avenging him."

Allah The Arab term for the high god in pre-Islamic Arabia that was adopted by the followers of Muhammad and the Islamic faith.

THE LIFE OF MUHAMMAD AND THE GENESIS OF ISLAM

Which aspects of Muhammad's religious message do you think accounted for its powerful appeal to both urban dwellers and nomadic peoples in Arabia and beyond?

By the 6th century C.E., camel nomads were dominant throughout much of Arabia. The civilized centers to the south were in ruins, and trading centers such as Mecca and Medina depended on alliances with neighboring bedouin tribes to keep the caravan routes open. The constricted world of clan and kin, nomadic camp, blood feud, and local gods persisted despite the lure of the empires and cosmopolitan urban centers that stretched in a great arc to the north and east of the Arabian peninsula (see Map 7.1).

But pressures for change were mounting. Both the Byzantine and **Sasanian empires** struggled to assert greater control over the nomadic tribes of the peninsula. In addition, Arab peoples migrated into Mesopotamia and other areas to the north, where they came increasingly under foreign influence. From these regions, the influence of established monotheistic religions, especially Judaism and Christianity, entered Arabia. These new currents gave rise to a number of Arab prophets who urged the bedouin tribes to renounce idol worship and rely on a single, almighty god. The prophet **Muhammad** and the new religion that his revelations inspired in the early decades of the 7th century responded both to these influences flowing into Arabia and to related social dislocations that were disrupting Arab life.

The hardships of Muhammad's early life underscore the importance of clan ties in the Arabian world. He was born around 570 C.E. into a prominent clan of the Quraysh tribe, the Banu Hashim, in a bedouin encampment where he spent the first six years of his life. Because his father died before he was born, Muhammad was raised by his father's relatives. The loss of his father was compounded by the death of Muhammad's mother shortly after he went to live with her some years later. Despite these early losses, Muhammad had the good fortune to be born into a respected clan and powerful tribe. His paternal uncle, Abu Talib, was particularly fond of the boy and served as his protector and supporter through much of his early life. Muhammad's grandfather, who like other leading members of the clan was engaged in commerce, educated the young man in the ways of the merchant. With Abu Talib, Muhammad made his first caravan journey to Syria, where on this and later trips he met adherents of the Christian and Jewish faiths, whose beliefs and practices had a great impact on his teachings.

In his adolescence, Muhammad took up residence in Mecca. By his early 20s he was working as a trader for **Khadijah**, the widow of a wealthy merchant, whom he married some years later. His life as a merchant in Mecca and on the caravan routes exposed Muhammad to the world beyond Arabia and probably made him acutely aware of the clan rivalries that had divided the peoples of the region for millennia. He would also have become increasingly concerned about new forces undermining solidarity within the clans. The growth of the towns and trade had enriched some clan families and left others behind, often in poverty. It had also introduced a new source of tension between clan and tribal groupings because some clans, such as the Umayyads, grew rich on the profits from commerce, whereas others maintained their herding lifestyle.

As a trader and traveler, Muhammad would almost certainly have been aware of the new religious currents that were sweeping Arabia and surrounding areas in the early 7th century. Particularly notable among these was the spread of monotheistic ideas and a growing dissatisfaction with the old gods that had been venerated by the bedouin peoples. In Muhammad's time, several prophets had arisen, proclaiming a new faith for the Arabs.

Although socially prominent, economically well off, and widely admired for his trading skills and trustworthiness, Muhammad grew increasingly distracted and dissatisfied with a life focused on material gain. He spent increasing amounts of time in meditation in the hills and wilderness that surrounded Mecca. In 610 or earlier, he received the first of many revelations, which his followers believe Allah transmitted to him through the angel Gabriel. These revelations were later written in Arabic and collected in the **Qur'an**. The teachings and injunctions of the Qur'an formed the basis of the new religion that Muhammad began to preach to his clan and the people of Mecca.

In the 7th century the revelations of the prophet Muhammad provided the basis for the emergence of a new religion—Islam—in the Arabian peninsula. Although initially an Arab religion, in both beliefs and practices, Islam contained a powerful appeal that eventually made it one of the great world religions.

Sasanian empires The dynasty that ruled Persia (contemporary Iran) in the centuries before the rise of Muhammad and the early decades of Islamic expansion.

Muhammad Prophet of Islam; born c. 570 to Banu Hashim clan of Quraysh tribe in Mecca; raised by father's family; received revelations from Allah in 610 C.E. and thereafter; died in 632.

Khadijah [kah-DEE-juh] (555–619) First wife of the prophet Muhammad, who had worked for her as a trader.

Qur'an (7th c. C.E.)

Persecution, Flight, and Victory

At first Muhammad's following was small, consisting mainly of his wife, several members of his clan, and some servants and slaves. As his message was clarified with successive revelations, the circle of the faithful grew so that the Umayyad notables who dominated Meccan life saw him as a threat to their own wealth and power. Above all, the new faith threatened to supplant the gods of the Ka'ba, whose shrines had done so much to establish the city as a center of commerce and bedouin interchange. Although he was protected for a time by his own clan, Muhammad was increasingly threatened by the Umayyads, who plotted with other clans to murder him. It was clear that Muhammad must flee Mecca, but where was he to find refuge? Muhammad's reputation as a skillful and fair negotiator prepared the way for his successful flight from Umayyad persecution. The quarrels between the clans in the nearby city of Medina had set off increasingly violent clashes, and the oasis community was on the verge of civil war. Leaders of the bedouin clans in Medina sent a delegation to invite Muhammad, who was related to them on his mother's side, to mediate their disputes and put an end to the strife that had plagued the town.

Clever ruses and the courage of his clansman Ali, who at one point took Muhammad's place and thus risked becoming the target of assassins, secured in 622 the safe passage of Muhammad and a small band of followers from Mecca to Medina. His *hijra* (HIH-jruh), or flight to Medina, marks the first year of the Islamic calendar. In Medina he was given a hero's welcome. He soon justified this warm reception by deftly settling the quarrels between the bedouin clans of the town. His wisdom and skill as a political leader won him new followers, who joined those who had accompanied him from Mecca as the core believers of the new faith.

In the eyes of the Umayyad notables, Muhammad's successes made him a greater threat than ever. Not only was he preaching a faith that rivaled their own, but his leadership was strengthening Mecca's competitor, Medina. Muslim raids on Meccan caravans provided yet another source of danger. Determined to put an end to these threats, the Quraysh launched a series of attacks in the mid-620s on Muhammad and his followers in Medina. These attacks led to several battles. In these clashes, Muhammad proved an able leader and courageous fighter.

The ultimate victory for Muhammad and his followers was signaled by a treaty with the Quraysh in 628, which included a provision granting the Muslims permission to visit the shrine at Ka'ba in Mecca during the season of truce. By then Muhammad's community had won many bedouin allies, and more than 10,000 converts accompanied him on his triumphal return to his hometown in 629. After proving the power of Allah, the single god he proclaimed, by smashing the idols of the shrine, Muhammad gradually won over the Umayyads and most of the other inhabitants of Mecca to the new faith.

Arabs and Islam

Although Islam was soon to become one of the great world religions, the beliefs and practices of the prophet Muhammad were initially adopted only by the Arab town dwellers and bedouins among whom he had grown up. There is a striking parallel here with early Christianity, which focused on Jewish converts. The new religion preached by Muhammad had much to offer the divided peoples of Arabia. It gave them a form of monotheism that belonged to no single tribe and transcended clan and class divisions. It provided a religion that was distinctly Arab in origin and yet the equal of the monotheistic faiths held by the Christians and Jews, who lived in the midst of the bedouin tribes. If anything, the monotheism preached by Muhammad was even more uncompromising than that of the Christians because it allowed no intermediaries between the individual and God. God was one; there were no saints, and angels were nothing more than messengers. In addition, there were no priests in the Christian or Jewish sense of the term.

Islam offered the possibility of an end to the vendettas and feuds that had so long divided the peoples of Arabia and had undermined their attempts to throw off the domination of neighboring empires. The **umma**, or community of the faithful, transcended old tribal boundaries, and it made possible a degree of political unity undreamed of before Muhammad's time. The new religion provided a single and supernaturally sanctioned source of authority and discipline. With unity, the skills and energies that the bedouins had once channeled toward warring with each other were turned outward in a burst of conquest that is perhaps unmatched in human history in its speed and extent. From vassals, borderland warriors, or contemptible "savages" of the desert waste, the Arab bedouins were transformed into the conquerors and rulers of much of the Middle Eastern world.

Ali (c. 599–661) Cousin and son-in-law of Muhammad; one of orthodox caliphs; focus for Shi'a.

umma Community of the faithful within Islam; transcended old tribal boundaries to create degree of political unity.

The new religion also provided an ethical system that did much to heal the deep social rifts within Arabian society. Islam stressed the dignity of all believers and their equality in the eyes of Allah. It promoted a moral code that stressed the responsibility of the well-to-do and strong for the poor and weak, the aged and infirm. Payment of the **zakat**, a tax for charity, was obligatory in the new faith. In both his revelations and his personal behavior, Muhammad enjoined his followers to be kind and generous to their dependents, including slaves. He forbade the rich to exploit the poor through exorbitant rents or rates of interest for loans.

The prophet's teachings and the revelations of the Qur'an soon were incorporated into an extensive body of law that regulated all aspects of the lives of the Muslim faithful. Held accountable before Islamic law on earth, they lived in a manner that would prepare them for the Last Judgment, which in Islam, as in Christianity, would determine their fate in eternity. A stern but compassionate God and a strict but socially minded body of law set impressive standards for the social interaction between adherents of the new faith.

Universal Elements in Islam

Although only Arabs embraced the religion of Islam in its early years, from the outset it contained beliefs and practices that would give it a strong appeal to peoples at virtually all stages of social development and in widely varying cultural settings. Some of these beliefs—Islam's uncompromising monotheism, highly developed legal codes, egalitarianism, and strong sense of community—were the same as the attributes that had won it support among the peoples of Arabia. Its potential as a world religion was enhanced by the fact that most of the attributes of Islam were to some degree anticipated by the other Semitic religions, particularly Judaism and Christianity, with which Muhammad had contact for much of his life. He accepted the validity of the earlier divine revelations that had given rise to the Jewish and Christian faiths. He taught that the revelations he had received were a refinement of these earlier ones and that they were the last divine instructions for human behavior and worship.

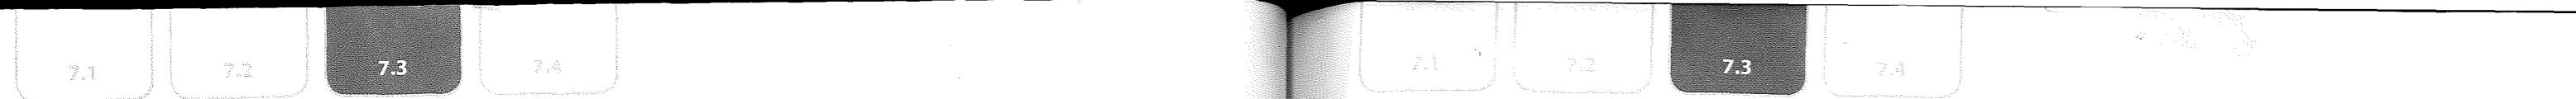

View the Closer Look on MyHistoryLab: The Ka'ba in Mecca

FIGURE 7.3 The Ka'ba in Mecca, with masses of pilgrims. Each year tens of millions of the Muslim faithful from all around the world make the journey to the holy sites of Arabia. The rituals performed by pilgrims at Mecca and Medina are key religious duties for all who can afford to travel to the holy cities.

zakat Tax for charity; obligatory for all Muslims.

five pillars The obligatory religious duties of all Muslims; confession of faith, prayer, fasting during Ramadan, zakat, and hajj.

Ramadan Islamic month of religious observance requiring fasting from dawn to sunset.

hajj A Muslim's pilgrimage to the holy city of Mecca, to worship Allah at the Ka'ba.

In addition to the beliefs and practices that have given Islam a universal appeal, its **five pillars**, principles that must be accepted and followed by all believers, provided the basis for an underlying religious unity. (1) The confession of faith was simple and powerful: "There is no God but Allah, and Muhammad is his Prophet." The injunctions (2) to pray, facing the holy city of Mecca, five times a day and (3) to fast during the month of **Ramadan**, enhanced community solidarity and allowed the faithful to demonstrate their fervor. (4) The zakat, or tithe for charity, also strengthened community cohesion and won converts from those seeking an ethical code that stressed social responsibility and the unity of all believers. (5) The **hajj**, or pilgrimage to the holy city of Mecca, to worship Allah at the Ka'ba, shown in Figure 7.3, drew together the faithful from Morocco to China. No injunction did more to give Islam a universal character.

THE ARAB EMPIRE OF THE UMAYYADS

7.3

What were the key factors that account for the rapid Arab conquests in the Middle East and Central Asia and North Africa?

Despite a time of crisis after the death of the prophet Muhammad in 632 C.E., the Muslim community held together. Eventually, Muhammad's old adversaries, the Umayyad clan, seized leadership of the Muslim faithful and began a sequence of stunning conquests throughout the Middle East and north Africa.

Many of the bedouin tribes that had converted to Islam renounced the new faith in the months after Muhammad's death, and his remaining followers quarreled over who should succeed him. Although these quarrels were never fully resolved, the community managed to find new leaders who directed a series of campaigns to force those who had abandoned Islam to return to the fold. Having united most of Arabia under the Islamic banner by 633, Muslim military commanders began to mount serious expeditions beyond the peninsula, where only probing attacks had occurred during the lifetime of the prophet and in the period of tribal warfare after his death. The courage, military prowess, and religious zeal of the warriors of Islam, and the weaknesses of the empires that bordered on Arabia, resulted in stunning conquests in Mesopotamia, north Africa, and Persia, which dominated the next two decades of Islamic history. The empire built from these conquests was Arab rather than Islamic. Most of it was ruled by a small Arab warrior elite, led by the Umayyads and other prominent clans. These groups had little desire to convert the subject populations, either Arab or otherwise, to the new religion.

Consolidation and Division in the Islamic Community

The leadership crisis brought on by Muhammad's death in 632 was compounded by the fact that he had not appointed a successor or even established a procedure by which a new leader would be chosen. Opinion within the Muslim community was deeply divided as to who should succeed him. In this moment of extreme danger, a strong leader who could hold the Islamic community together was urgently needed. On the afternoon Muhammad died, one of the clans that remained committed to the new faith called a meeting to select a leader who would be designated as the **caliph**, the political and religious successor to Muhammad. Several choices were possible, and a deadlock between the clans appeared likely—a deadlock that would almost certainly have been fatal to a community threatened by enemies on all sides.

One of the main candidates, Ali, the cousin and son-in-law of Muhammad, was passed over because he was considered too young to assume a position of such great responsibility. This decision later proved to be a major source of division in the Islamic community. But in 632, it appeared that a difficult reconciliation had been won by the choice of one of Muhammad's earliest followers and closest friends, **Abu Bakr** (ah-BOO BA-kuhr) (caliph from 632 to 634). In addition to his courage, warmth, and wisdom, Abu Bakr was well versed in the genealogical histories of the bedouin tribes, which meant that he knew which tribes could be turned against each other and which ones could be enticed into alliances. Initially, at least, his mandate was very limited. He received no financial support from the Muslim community. Thus, he had to continue his previous occupation as a merchant on a part-time basis, and he only loosely controlled the military commanders.

These commanders turned out to be very able. After turning back attacks on Mecca, the Islamic faithful routed one after another of the bedouin tribes. The defeat of rival prophets and some of the larger clans in what were known as the **Ridda Wars** soon brought about the return of the Arabian tribes to the Islamic fold. Emboldened by the proven skills of his generals and the swelling ranks of the Muslim faithful, Abu Bakr oversaw raids to the north of Arabia into the sedentary zones in present-day Iraq and Syria and westward into Egypt (Map 7.1).

caliph The political and religious successor to Muhammad.

Abu Bakr [ah-BOO BA-kuhr] The first caliph or leader of the Muslim faithful elected after Muhammad's death in 632. Renown for his knowledge of the nomadic tribes who then dominated the Islamic community.

Ridda Wars Wars that followed Muhammad's death in 632; resulted in defeat of rival prophets and some of larger clans; restored unity of Islam.

The unified bedouin forces had originally intended to raid for booty and then retreat back into the desert. But their initial probes revealed the vulnerability of the Byzantine and Persian empires, which dominated or ruled the territories into which the Muslim warriors rode. The invaders were also encouraged by the growing support of the Arab bedouin peoples who had been migrating into the Fertile Crescent for centuries. These peoples had long served as the vassals and frontier guardians of the Byzantine and Persian empires. Now they joined their brethren in a combined assault on both of them.

Motives for Arab Conquests

The Arab warriors were driven by many forces. The unity provided by the Islamic faith gave them a new sense of common cause and strength. United, they could stand up to the non-Arab rulers who had so long played them against each other and despised them as unwashed and backward barbarians from the desert wastelands. It is also probable that the early leaders of the community saw the wars of conquest as a good way to release the pent-up energies of the martial bedouin tribes they now sought to lead (see Figure 7.4). Above all, the bedouin warriors were drawn to the campaigns of expansion by the promise of a share in the booty to be won in the rich farmlands raided and the tribute that could be exacted from towns that came under Arab rule. As an early Arab writer observed, the bedouins forsook their life as desert nomads not out of a promise of religious rewards, but because of a "yearning after bread and dates."

The chance to glorify their new religion may have been a motive for the Arab conquests, but they were not driven by a desire to win converts to it. In fact, other than fellow bedouin tribes of Arab descent, the invaders had good reason to avoid mass conversions. Not only would Arab warriors have to share the booty of their military expeditions with ever larger numbers if converts were made, but Muslims were exempted from some of the more lucrative taxes levied on Christian, Jewish, and other non-Muslim groups. Thus, the vision of **jihads**, or holy wars launched to forcibly spread the Muslim faith, which has long been associated with Islam in the Christian West, misrepresents the forces behind the early Arab expansion.

jihads [jih-HAHDs] Struggles; often used for wars in defense of the faith, but also a term to indicate personal quests for religious understanding.

Weaknesses of the Adversary Empires

Of the two great empires that had once fought for dominance in the Fertile Crescent transit zone, the Sasanian Empire of Persia proved the more vulnerable. Power in the extensive Sasanian domains was formally concentrated in the hands of an autocratic emperor. By the time of the Arab explosion, the emperor was manipulated by a landed, aristocratic class that harshly exploited the farmers who made up most of the population of the empire. Zoroastrianism, the official religion of the emperor, lacked popular roots. By contrast, the religion of a visionary reformer named Mazdak, which had won considerable support among the peasants, had been brutally suppressed by the Sasanian rulers in the period before the rise of Islam.

At first, the Sasanian commanders had contempt for the Arab invaders and set out against them with poorly prepared forces. By the time the seriousness of the Islamic threat was made clear by decisive Arab victories in the Fertile Crescent region and the defection of the Arab tribes on the frontier,

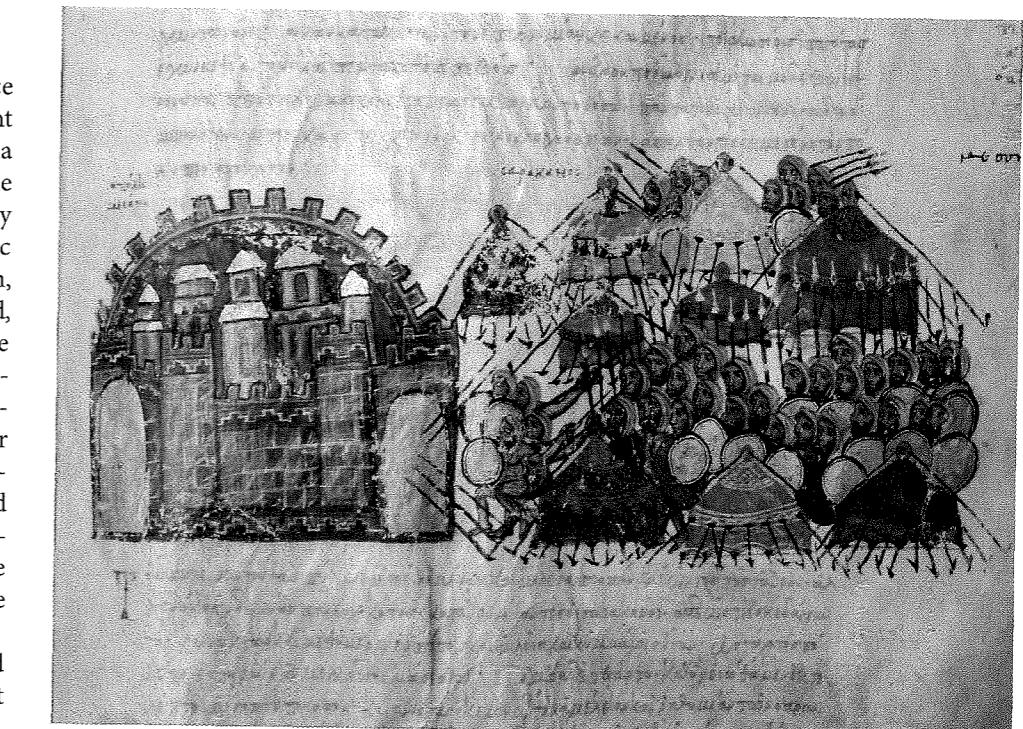

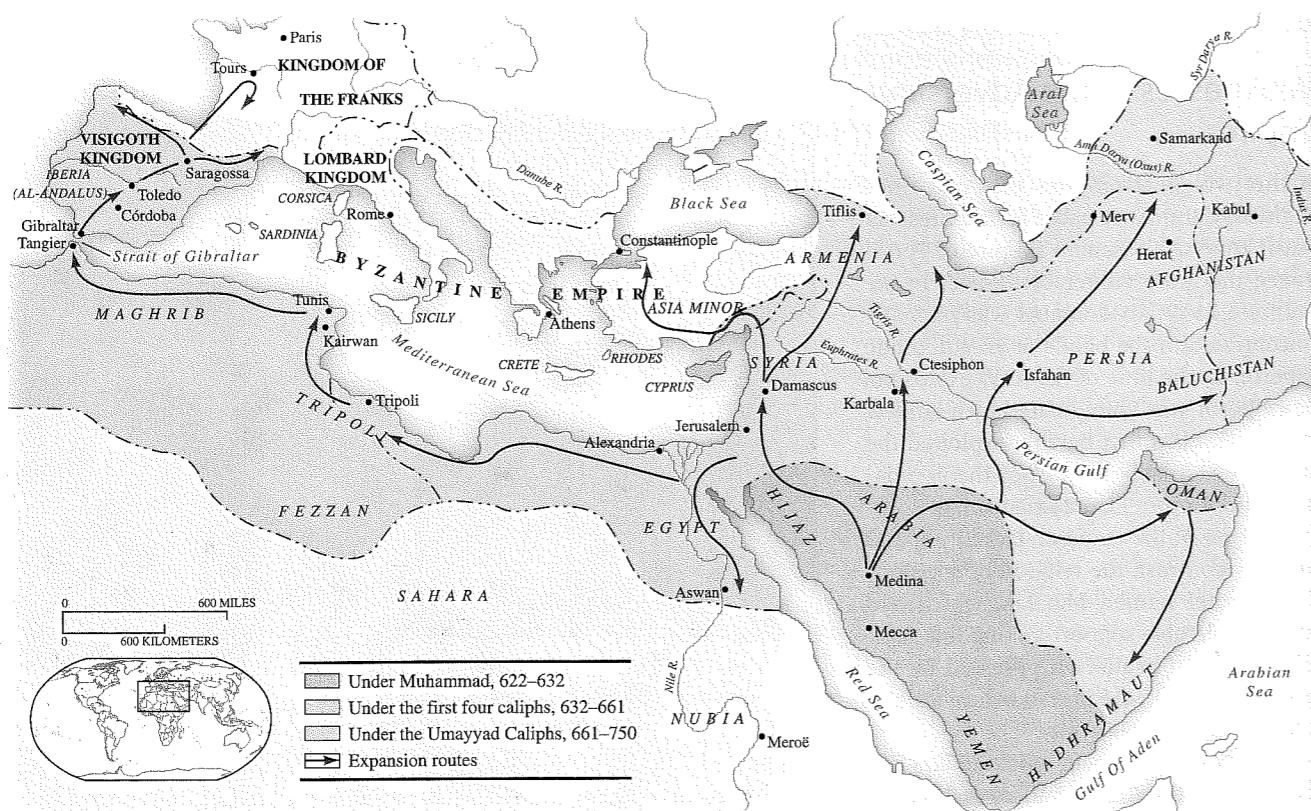

FIGURE 7.4 This illustration from an account of the Muslim conquest of Sicily in the 9th century C.E. is one of the earliest known artistic renderings of an Arab army at war. The camp, the armored warriors, and the siege in progress help us to envision the Muslim forces that built the first great Arab empire under the early caliphs in the 7th century C.E.

Muslim warriors had broken into the Sasanian heartland. Further Muslim victories brought about the rapid collapse of the vast empire. The Sasanian rulers and their forces retreated eastward in the face of the Muslim advance. The capital was taken, armies were destroyed, and generals were slain. When in 651 the last of the Sasanian rulers was assassinated, Muslim victory and the destruction of the empire were ensured.

Despite an equally impressive string of Muslim victories in the provinces of their empire, the Byzantines proved a stronger adversary (see Chapter 10). However, their ability to resist the Muslim onslaught was impeded by both the defection of their own frontier Arabs and the support the Muslim invaders received from the Christians of Syria and Egypt. Members of the Christian sects dominant in these areas, such as the **Copts** and **Nestorians**, had long resented the rule of the Orthodox Byzantines, who taxed them heavily and openly persecuted them as heretics. When it became clear that the Muslims would not only tolerate the Christians but tax them less heavily than the Byzantines did, these Christian groups rallied to the Arabs.

Weakened from within and exhausted by the long wars fought with Persia in the decades before the Arab explosion, the Byzantines reeled from the Arab assaults. Syria, western Iraq, and Palestine were quickly taken by the Arab invaders, and by 640 a series of probes had been made into Egypt, one of the richest provinces of the empire (Map 7.2). In the early 640s, the ancient center of learning and commerce, Alexandria, was taken, most of Egypt was occupied, and Arab armies extended their conquests into Libya to the west. Perhaps even more astounding from the point of view of the Byzantines, by the mid-640s the desert bedouins were putting together war fleets that increasingly challenged the long-standing Byzantine mastery of the Mediterranean. The rise of Muslim naval supremacy in the eastern end of the Mediterranean sealed the loss of Byzantium's rich provinces in Syria and Egypt. It also opened the way to further Muslim conquests in north Africa, the Mediterranean islands, and even southern Italy (Map 7.2 and Figure 7.4). For a time the Byzantines managed to rally their forces and stave off further inroads into their Balkan and Asia Minor heartlands. But the early triumphs of

MAP 7.2 The Expansion of Islamic Civilization, 622–750 Whether by land or sea, Islamic civilization expanded by both conquest and trade, while the Muslim faith was spread mainly peacefully along ancient trading routes, often by sufi holy men.

the Arab invaders had greatly reduced the strength of the Byzantine Empire. Although it survived for centuries, it was henceforth a kingdom under siege.

The Problem of Succession and the Sunni–Shi'a Split

The stunning successes of Muslim armies and the sudden rise of an Arab empire diverted attention, for a time at least, from continuing divisions within the community. Although these divisions were often generations old and the result of personal animosities, resentments had also begun to build over how the booty from the conquests should be divided among the tribal groups that made up the Islamic community. In 656, just over two decades after the death of the prophet, the growing tensions broke into open violence. The spark that began the conflict was the murder of the third caliph, **Uthman**, by mutinous warriors returning from Egypt. His death was the signal for the supporters of Ali to proclaim him as caliph. Uthman's unpopularity among many of the tribes, particularly those from Medina and the prophet's earliest followers, arose in part from the fact that he was the first caliph to be chosen from Muhammad's early enemies, the Umayyad clan. Already angered by Uthman's murder, the Umayyads rejected Ali's claims and swore revenge when he failed to punish Uthman's assassins. Warfare erupted between the two factions.

Ali was a renowned warrior and experienced commander, and his deeply committed supporters soon gained the upper hand. After his victory at the Battle of the Camel in late 656, most of the Arab garrisons shifted to his side against the Umayyads, whose supporters were concentrated in the province of Syria and the holy city of Mecca. Just as Ali was on the verge of defeating the Umayyad forces at the **Battle of Siffin** in 657, he was won over by a plea for mediation. His decision to accept mediation was fatal to his cause. Some of his most fervent supporters renounced his leadership and had to be suppressed violently. While representatives of both parties tried unsuccessfully to work out a compromise, the Umayyads regrouped their forces and added Egypt to the provinces backing their claims. In 660, **Mu'awiya**, the new leader of the Umayyads, was proclaimed caliph in Jerusalem, directly challenging Ali's position. A year later, Ali was assassinated, and his son Hasan was pressured by the Umayyads into renouncing his claims to the caliphate.

In the decades after the prophet's death, the question of succession generated deep divisions in the Muslim community. The split between the **Sunnis**, who backed the Umayyads, and the **Shi'a**, or supporters of Ali, remains to this day the most fundamental in the Islamic world. Hostility between these two branches of the Islamic faithful was heightened in the years after Ali's death by the continuing struggle between the Umayyads and Ali's second son, Husayn. After being abandoned by the clans in southern Iraq, who had promised to rise in a revolt supporting his claims against the Umayyads, Husayn and a small party were overwhelmed and killed at **Karbala** in 680. From that point on, the Shi'a mounted sustained resistance to the Umayyad caliphate.

Over the centuries, factional disputes about who had the right to succeed Muhammad, with the Shi'a recognizing none of the early caliphs except Ali, have been compounded by differences in belief, ritual, and law that have steadily widened the gap between Sunnis and Shi'a. These divisions have been further complicated by the formation of splinter sects within the Shi'a community in particular, beginning with those who defected from Ali when he agreed to arbitration.

The Umayyad Imperium

After a pause to settle internal disputes over succession, the remarkable sequence of Arab conquest was renewed in the last half of the 7th century. Muslim armies broke into central Asia, inaugurating a rivalry with Buddhism in the region that continues to the present day (Map 7.2). By the early 8th century, the southern prong of this advance had reached into northwest India. Far to the west, Arab armies swept across north Africa and crossed the Straits of Gibraltar to conquer Spain and threaten France. Although the Muslim advance into western Europe was blocked by the hard-fought victory of Charles Martel and the Franks at Poitiers in 732, the Arabs did not fully retreat beyond the Pyrenees into Spain until decades later. Muslim warriors and sailors dominated much of the Mediterranean, a position that was solidified by the conquest of key islands such as Crete, Sicily, and Sardinia in the early decades of the 9th century. By the early 700s, the Umayyads ruled an empire that extended from Spain in the west to the steppes of central Asia in the east. Not since the Romans had there been an empire to match it; never had an empire of its size been built so rapidly.

Uthman Third caliph and member of Umayyad clan; murdered by mutinous warriors returning from Egypt; death set off civil war in Islam between followers of Ali and the Umayyad clan.

Battle of Siffin Fought in 657 between forces of Ali and Umayyads; settled by negotiation that led to fragmentation of Ali's party.

Mu'awiya [moo-UH-wee-uh] (602–680) Leader of Umayyad clan; first Umayyad caliph following civil war with Ali.

Sunnis Political and theological division within Islam; supported the Umayyads.

Shi'a Also known as Shi'ites; political and theological division within Islam; followers of Ali.

Karbala Site of defeat and death of Husayn, son of Ali; marked beginning of Shi'a resistance to Umayyad caliphate.

Damascus Syrian city that was capital of Umayyad caliphate.

Although Mecca remained the holy city of Islam, under the Umayyads the political center of community shifted to **Damascus** in Syria, where the Umayyads chose to live after the murder of Uthman. From Damascus a succession of Umayyad caliphs strove to build a bureaucracy that would bind together the vast domains they claimed to rule. The empire was very much an Arab conquest state. Except in the Arabian peninsula and in parts of the Fertile Crescent, a small Arab and Muslim aristocracy ruled over peoples who were neither Arab nor Muslim. Only Muslim Arabs were first-class citizens of this great empire. They made up the core of the army and imperial administration, and only they received a share of the booty derived from the ongoing conquests. They could be taxed only for charity. The Umayyads sought to keep the Muslim warrior elite concentrated in garrison towns and separated from the local population. It was hoped that isolation would keep them from assimilating to the subjugated cultures, because intermarriage meant conversion and the loss of taxable subjects.

Converts and "People of the Book"

Umayyad attempts to block extensive interaction between the Muslim warrior elite and their non-Muslim subjects had little chance of succeeding. The citified bedouin tribes were soon interacting intensively with the local populations of the conquered areas and intermarrying with them. Equally critical, increasing numbers of these peoples were voluntarily converting to Islam, despite the fact that conversion did little to advance them socially or politically in the Umayyad period. In this era Muslim converts, **mawali**, still had to pay property taxes and in some cases the **jizya**, or head tax, levied on nonbelievers. They received no share of the booty and found it difficult, if not impossible, to get important positions in the army or bureaucracy. They were not even considered full members of the umma but were accepted only as clients of the powerful Arab clans.

As a result, the number of conversions in the Umayyad era was low. By far the greater portion of the population of the empire were the **dhimmi**, or "people of the book." As the name suggests, it was originally applied to Christians and Jews who shared the Bible with the Muslims. As Islamic conquests spread to other peoples, such as the Zoroastrians of Persia and the Hindus of India, the designation **dhimmi** was necessarily stretched to accommodate the majority groups within these areas of the empire. As the early illustration of Jewish worship in Muslim Spain in Figure 7.5 shows, the Muslim overlords generally tolerated the religions of dhimmi. Although they had to pay the jizya and both commercial and property taxes, their communities and legal systems were left intact, and they were allowed to worship as they pleased. This approach made it a good deal easier for these peoples to accept Arab rule, particularly because many had been oppressed by their pre-Muslim overlords.

Family and Gender Roles in the Umayyad Age

Broader social changes within the Arab and widening Islamic community were accompanied by significant shifts in the position of women, both within the family and in society at large. In the first centuries of Arab expansion, the greatly strengthened position of women under Islam prevailed over the seclusion and subordination that were characteristic features of women's lives through much of the rest of the pre-Islamic Middle East. Muhammad's teachings and the dictates of the Qur'an stressed the moral and ethical dimensions of marriage. The kindness and concern the prophet displayed for his own wives and daughters did much to strengthen the bonds between husband and wife and the nuclear family in the Islamic community.

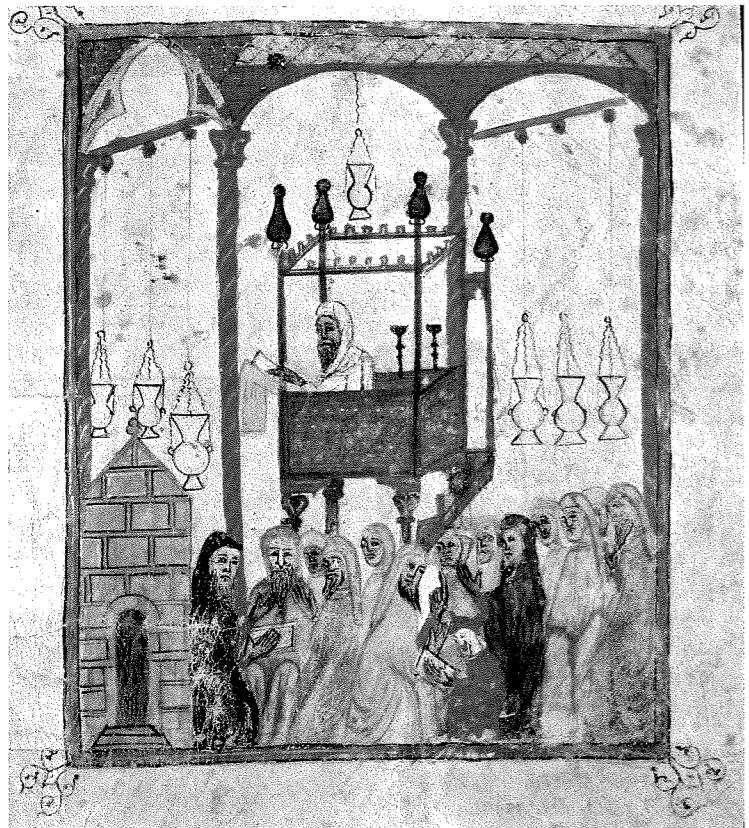

FIGURE 7.5 Jews worshiping in a synagogue. As dhimmi, or "people of the book," Jews were allowed to build impressive synagogues and worship freely throughout the Muslim world. Jewish merchant families amassed great wealth, often in partnership with Muslims, and Jewish scholars were revered from Spain to Baghdad for their many contributions to learning.

Muhammad encouraged marriage as a replacement for the casual and often commercial sexual liaisons that had been widespread in pre-Islamic Arabia. He vehemently denounced adultery on the part of both husbands and wives, and he forbade female infanticide, which apparently had been widely practiced in Arabia in pre-Islamic times. Men were allowed to marry up to four wives. But the Qur'an forbade multiple marriages if the husband could not support more than one wife or treat all of his wives equally. Women could not take more than one husband. But Muhammad gave his own daughters a say as to whom they would marry and greatly strengthened the legal rights of women in inheritance and divorce. He insisted that the bride-price paid by the husband's family be given to his future wife rather than to her father.

The prophet's teachings proclaimed the equality of men and women before God and in Islamic worship. Women, most notably his wife Khadijah, were some of Muhammad's earliest and bravest followers. In the battle with the Meccans, women accompanied the forces on both sides, and a woman was the first martyr for the new faith. Many of the **hadiths**, or traditions of the prophet, which have played such a critical role in Islamic law and ritual, were recorded by women. In addition, Muhammad's wives and daughters played an important role in compiling the Qur'an.

Although women were not allowed to lead prayers, they played an active role in the politics of the early community. Muhammad's widow, Aisha, actively promoted the claims of the Umayyad party against Ali, while Zainab, Ali's daughter, went into battle with the ill-fated Husayn. Through much of the Umayyad period, little is heard of veiled Arab women, and women appear to have pursued a wide range of occupations, including scholarship, law, and commerce. Perhaps one of Zainab's nieces best epitomizes the independent-mindedness of Muslim women in the early Islamic era. When chided for going about without a veil, she replied that Allah in his wisdom had chosen to give her a beautiful face and that she intended to make sure that it was seen in public so that all might appreciate his grace.

Umayyad Decline and Fall

The ever-increasing size of the royal harem was just one manifestation of the Umayyad caliphs' growing addiction to luxury and soft living. Their legitimacy had been disputed by various Muslim factions since their seizure of the caliphate. But the Umayyads further alienated the Muslim faithful as they became more aloof in the early 8th century and retreated from the dirty business of war into their pleasure gardens and marble palaces. Their abandonment of the frugal, simple lifestyle followed by Muhammad and the earliest caliphs—including Abu Bakr, who made a trip to the market the day after he was selected to succeed the prophet—enraged the dissenting sects and sparked revolts throughout the empire. The uprising that proved fatal to the short-lived dynasty began among the frontier warriors who had fought and settled in distant Iran.

By the mid-8th century, more than 50,000 warriors had settled near the oasis town of Merv in the eastern Iranian borderlands of the empire (Figure 7.6). Many of them had married local women, and over time they had come to identify with the region and to resent the dictates of governors sent from distant Damascus. The warrior settlers were also angered by the fact that they were rarely given the share of the booty, which was now officially tallied in the account books of the royal treasury, they had earned by fighting the wars of expansion and

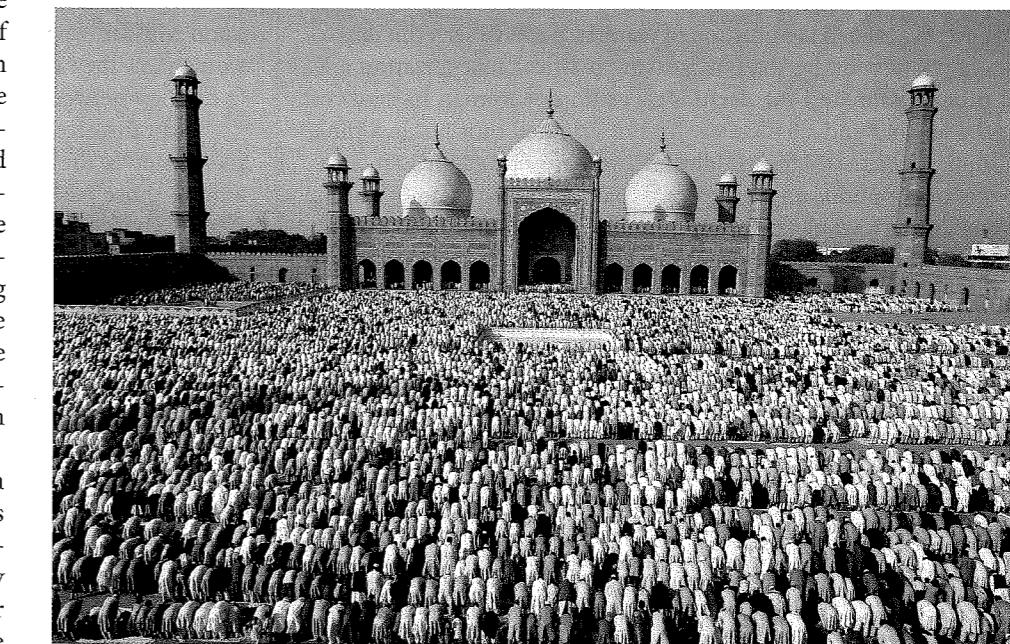

FIGURE 7.6 Muslim worshippers in modern Pakistan. Whether in a nearby mosque or in their homes and shops, Muslims are required to pray five times a day, facing the holy city of Mecca. Those congregating in a mosque, as in this photo, are oriented to Mecca by the qibla wall, which is marked by a highly ornamented inset that indicates the direction of the holy city. Men congregate in the open spaces in the center of and outside the mosque, while women pray in areas on the sides or in the back or, sometimes, in balconies above that are screened off by pillars or carved panels from the areas where the men worship.

THINKING HISTORICALLY

Civilization and Gender Relationships

WITHIN A CENTURY OF MUHAMMAD'S DEATH, the strong position women had enjoyed as a result of the teachings and example of the prophet had begun to erode. We do not fully understand all the forces that account for this decline. Ambiguities in the Qur'an and other early sources—especially the hadith, or traditions of the prophet—provide part of the answer. These sources indicate that, in both his domestic and public life, Muhammad was concerned about good treatment for women and defined certain rights, for example, to property. But early records also stipulate women's inferiority to men in key legal rights (differential punishments for adultery were a case in point). And, like their Christian counterparts, Islamic thinkers argued that women were more likely than men to be sinners. But more critical were the beliefs and practices of the urbanized, sedentary peoples in the areas the Arabs conquered and where many of them settled from the mid-7th century onward.

The example of these ancient and long-civilized peoples increasingly influenced the Arab bearers of Islam. They developed a taste for city life and the superior material and artistic culture of the peoples they ruled. In terms of gender roles, most of these influences weakened the position of women. We have seen this apparent connection between increasing political centralization and urbanization and the declining position of women in many of the ancient and classical civilizations treated thus far. In China, India, Greece, and the Middle East, women enjoyed broader occupational options and a stronger voice within the family, and in society as a whole, before the emergence of centralized polities and highly stratified social systems. In each case, the rise of what we have called civilizations strengthened paternal control within the family, inheritance through the male line, and male domination of positions of power and the most lucrative occupations. Women in these societies became more and more subjected to men—their fathers and brothers, husbands and sons—and more and more confined to the roles of homemakers and bearers of children. Women's legal rights were reduced, often sharply. In many civilizations, various ways were devised to shut women off from the world.

As we have seen, women played active and highly valued roles in the bedouin tribes of pre-Islamic Arabia. Particularly in towns such as Mecca, they experienced considerable freedom in terms of sexual and marriage partners, occupational choices (within the limited range available in an isolated pastoral society), and opportunities to influence clan decisions. The position of Muhammad's first wife, Khadijah, is instructive. Her position as a wealthy widow in charge of a thriving trading enterprise

reveals that women were able to remarry and to own and inherit property. They could also pursue careers, even after their husbands died. Khadijah employed Muhammad. After he had successfully worked for her for some time, she asked him to marry her, which apparently neither surprised nor scandalized her family or Meccan society. It is also noteworthy that Khadijah was 15 years older than Muhammad, who was 25 at the time of their betrothal.

The impact of the bedouin pattern of gender roles and relationships is also clear in the teachings and personal behavior of Muhammad. Islam did much to legalize the strong but by no means equal status of women. In addition, it gave greater uniformity to their position from one tribe, town, or region to the next. For a century or two after the prophet's death, women in the Islamic world enjoyed unprecedented opportunities for education, religious expression, and social fulfillment. Then the influences of the cultures into which the Arabs

had expanded began to take hold. The practices of veiling and female seclusion that were long followed by the non-Arab dwellers of Syria and Persia were increasingly adopted by or imposed upon Muslim women. Confined more and more to the home, women saw their occupational options decrease, and men served as their go-betweens in legal and commercial matters.

Ironically, given the earlier status of women, such as Khadijah, the erosion of the position of women was especially pronounced among those who lived in the cities that became the focus of Islamic civilization. Upper-class women, in particular, felt growing restrictions on their movement and activities. In the great residences that sprang up in the wealthy administrative centers and trading towns of the Middle East, the women's quarters were separate from the rest of the household and set off by high walls and gardens. In the palaces of Islamic rulers and provincial governors, this separation was marked by the development of the *harem*, or forbidden area. In the harem, the notables' wives and concubines lived in seclusion. They were constantly guarded by the watchful eyes and sharp swords of corps of eunuchs, men castrated specifically to qualify them for the task.

When upper-class women went into the city, they were veiled from head to toe and often were carried in covered sedan chairs by servants who guarded them from the glances of the townsmen and travelers. In their homes, upper-class women were spared the drudgery of domestic chores by large numbers of female slaves. If we are to judge from stories such as those related in the *Arabian Nights* (from which excerpts are included in the Document feature on page 178), female slaves and servants were largely at the mercy

(continued from previous page)

of their male masters. Although the veiling, seclusion, and other practices that limited the physical and occupational mobility of women also spread to the lower urban classes and rural areas, they were never as strictly observed there as in urban, upper-class households. Women from poorer families had to work to survive. Thus, they had to go out, "veiled but often unchaperoned," to the market or to work as domestic servants. Lower-class women also worked hard at home, not just at housekeeping but at weaving, rug-making, and other crafts that supplemented the family income. In rural areas and in towns distant from the main urban centers, veiling and confinement were observed less strictly. Peasant women worked the family or local landlord's fields, planted their own gardens, and tended the livestock.

Because of Islamic religion and law, in all locales and at all class levels the position of women in the Middle East never deteriorated to the same extent as in India, China, and many other civilized centers. Because of the need to read the Qur'an, women continued to be educated, family resources permitting, even if they rarely were able to use their learning for scholarship or artistic expression. Islamic law preserved for women property, inheritance, divorce, and remarriage rights that often were denied in other civilized societies. Thus, the strong position women had enjoyed in bedouin cultures, and that in many respects had been built into Islam, was never entirely undone by the customs and practices Muslims encountered as they came to rule the civilized centers in the rest of the Middle East.

The fact that the position of women has also been strong in other cultural areas where authority is decentralized and social organization not highly stratified, such as those in west Africa (see Chapter 9), suggests that at least in certain stages of its

development, civilization works against the interests of women. Women in decentralized societies have often been able to own their own property, to engage in key economic activities, and to play important roles in religious ceremonies. The positions and status they have achieved in decentralized societies, such as those in early Arabia or much of sub-Saharan Africa and southeast Asia, suggest factors that may help explain the greater balance in gender roles and power in less centralized societies. The very immediate connection between women and agriculture and stock-raising, which are central to survival in these societies, may also account for the greater respect accorded them and for their often prominent roles in fertility rituals and religious cults. Whatever the explanation, until the present era, higher degrees of centralization and social stratification—both characteristic features of civilized societies—have almost always favored men in the allotment of power and career opportunities.

QUESTIONS

- Compare the position of upper-class women in classical Indian, Chinese, Greek, and Roman societies with regard to their ability to hold property, opportunity to pursue careers outside the home, rights in marriage and divorce, and level of education. In which of these societies were women better off, and why?
- Were differences in the position of women at lower-class levels similar between these societies?
- In what ways were women better off in decentralized pastoral or forest-farming societies?
- What advantages have they enjoyed in highly urbanized and more centralized civilizations?

defending the frontiers. They were contemptuous of the Umayyads and the Damascus elite, whom they saw as corrupt and decadent. In the early 740s, an attempt by Umayyad palace officials to introduce new troops into the Merv area touched off a revolt that soon spread over much of the eastern portions of the empire (Map 7.2).

Marching under the black banners of the **Abbasid** party, which traced its descent from Muhammad's uncle, al-Abbas, the frontier warriors openly challenged Umayyad armies by 747. Deftly forging alliances with dissident groups that resisted the Umayyads throughout the empire, their leader, Abu al-Abbas, the great-great-grandson of the prophet's uncle, led his forces from victory to victory. Among his most important allies were the Shi'a, who, as we have seen, had rejected Umayyad authority from the time of Ali. Also critical were the mawali, or non-Arab converts to Islam. The mawali felt that under Umayyad rule they had never been recognized as fully Muslim. In supporting the Abbasids, the mawali hoped to attain full acceptance in the community of believers.

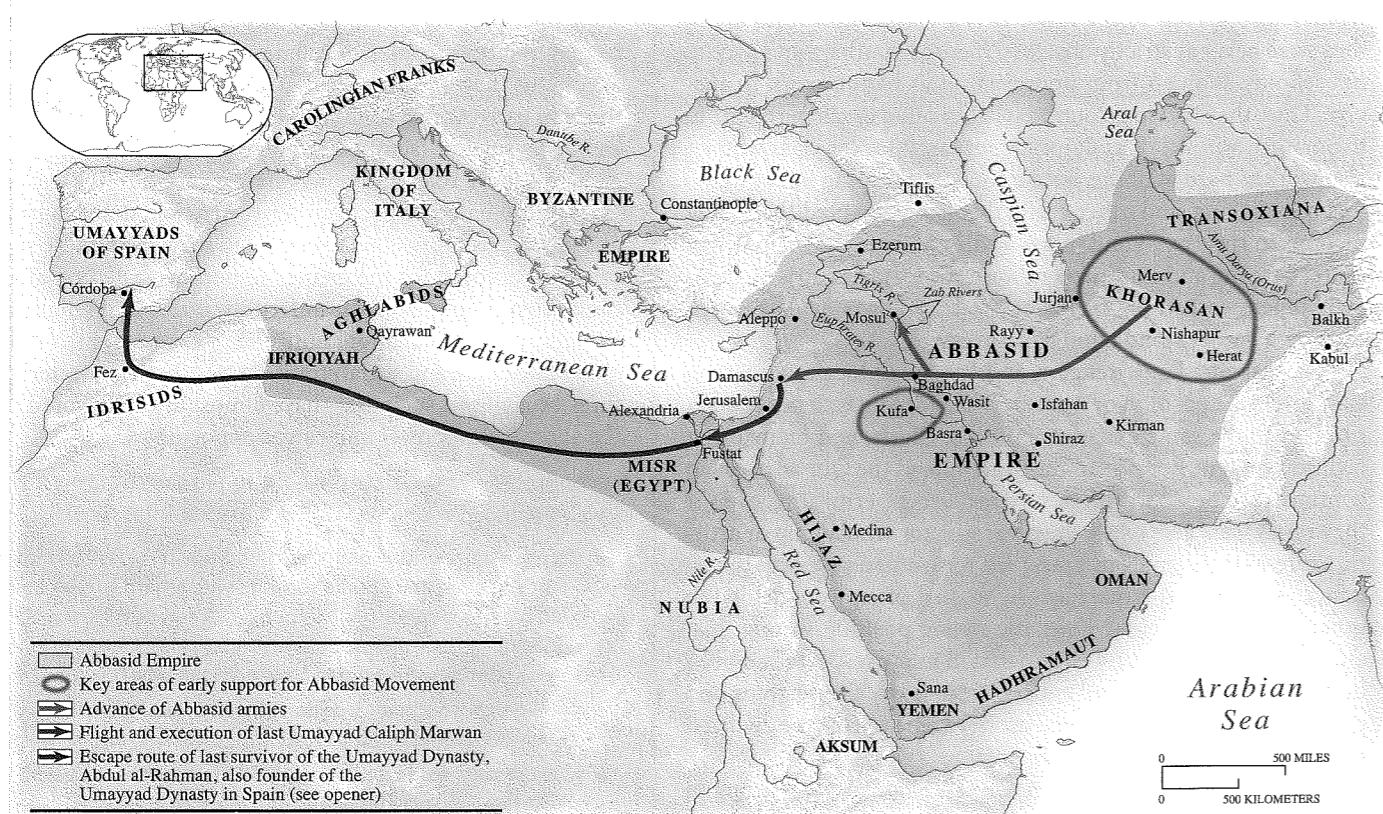

This diverse collection of Muslim rebels made short work of what remained of the Umayyad imperium. Persia and then Iraq fell to the rebels. In 750, the Abbasid forces met an army led by the Umayyad caliph himself in the massive **Battle of the River Zab** near the Tigris. The Abbasid victory opened the way for the conquest of Syria and the capture of the Umayyad capital.

Wanting to eliminate the Umayyad family altogether to prevent recurring challenges to his rule, Abu al-Abbas invited many members of the clan to what was styled as a reconciliation banquet. As the Umayyads were enjoying the feast, guards covered them with carpets and they were slaughtered by Abbas's troops. An effort was then made to hunt down and kill all the remaining members of the family throughout the empire. Most were slain, but, as we have seen, the grandson of a former caliph fled to Spain and founded there what later became the Umayyad caliphate of Córdoba, which lived on for centuries after the rest of the Umayyads' empire had disappeared (see Map 7.3 and Figure 7.1).

Abbasid [uh bas id, ab uh sid] Dynasty that succeeded the Umayyads as caliphs within Islam; came to power in 750 C.E.

Battle of the River Zab Victory of Abbasids over Umayyads; resulted in conquest of Syria and capture of Umayyad capital.

FROM ARAB TO ISLAMIC EMPIRE: THE EARLY ABBASID ERA

Under the Abbasids, who succeeded the Umayyads, Islam became a universal religion that spread across much of north Africa and Euro-Asia. With its capital at Baghdad, Islamic civilization flourished under the Abbasids, even as their empire began to fragment into regional power centers.

Baghdad Capital of Abbasid dynasty located in Iraq near ancient Persian capital of Ctesiphon.

7.4 In what ways was the Islamic religion a faith that elevated the status and opportunities of women, and what were the constraints on this process?

The rough treatment the Umayyad clan had received at the hands of the victorious Abbasids should have forewarned their Shi'a and mawali allies of what was to come. But the Shi'a and other dissenting groups continued the support that allowed the Abbasids to level all other centers of political rivalry. Gradually, the Abbasids rejected many of their old allies, becoming more and more righteous in their defense of Sunni Islam and increasingly less tolerant of what they called the heretical views of the various sects of Shi'ism. With the Umayyads all but eliminated and their allies brutally suppressed, the way was clear for the Abbasids to build a centralized, absolutist imperial order.

The fact that they chose to build their new capital, **Baghdad**, in Iraq near the ancient Persian capital of Ctesiphon was a clear sign of things to come. Soon the Abbasid caliphs were perched on jewel-encrusted thrones, reminiscent of those of the ancient Persian emperors, gazing down on the great gatherings of courtiers and petitioners who bowed before them in their gilt and marble audience halls. The caliphs' palaces and harems expanded to keep pace with their claims to absolute power over the Islamic faithful as well as the non-Muslim subjects of their vast empire.

The ever-expanding corps of bureaucrats, servants, and slaves who strove to translate Abbasid political claims into reality lived and worked within the circular walls of the new capital at Baghdad.

The bureaucratization of the Islamic Empire was reflected above all in the growing power of the **wazir**, or chief administrator and head of the caliph's inner councils. It was also embodied in a more sinister way in the fearful guise of the royal executioner, who stood close to the throne in the public audiences of the Abbasid rulers. The wazirs oversaw the building of an administrative infrastructure that allowed the Abbasids to project their demands for tribute to the most distant provinces of the empire. Sheer size, poor communications, and collusion between Abbasid officials and local notables meant that the farther the town or village was from the capital, the less effectively royal commands were carried out. But for more than a century, the Abbasid regime was fairly effective at collecting revenue from its subject peoples and preserving law and order over much of the empire.

VISUALIZING THE PAST

The Mosque as a Symbol of Islamic Civilization

FROM ONE END OF THE ISLAMIC world to the other, Muslim towns and cities can be readily identified by the domes and minarets of the mosques where the faithful are called to prayer five times daily. The illustrations included here trace the development of the mosque and the refinement of mosque architecture, the crowning glory of Islamic material culture, during the early centuries of Muslim expansion. As you look at these pictures and follow the development of the mosque, consider what the functions of the mosque and the evolving style of mosque architecture can tell us about Muslim beliefs and values and the impact of earlier religions, such as Judaism and Christianity, on Islam.

Given the low level of material culture in pre-Islamic Arabia, it is not surprising that the earliest prayer houses were simple in design and construction. In fact, these first mosques were laid out along the lines suggested by Muhammad's own house. They were square enclosures with a shaded porch on one side, a columned shelter on the other, and an open courtyard in between. The outer perimeter of the earliest mosques was made of reed mats, but soon more permanent stone walls surrounded the courtyard and prayer areas. After Mecca was taken and the Ka'ba became the central shrine of the new faith, each mosque was oriented to the qibla, or Mecca wall, which always faced in the direction of the holy city.

In the last years of the prophet, his chair was located so that the faithful could see and hear him during prayer sessions. During the time of the first caliphs, the raised area became the place from

Pulpit (minbar) from which the Friday sermons are delivered throughout the Muslim world.

which sermons were delivered. From the mid-8th century, this space evolved into a genuine pulpit (*minbar* in Arabic). Somewhat earlier, the practice of building a special and often elaborately decorated niche in the qibla had developed.

Over time, mosques became more elaborate. Very often the remains of Greek or Roman temples or abandoned Christian churches formed the core of major mosques, or the ruins of these structures were mined for stone for mosque construction. In the larger cities, the courtyards of the great mosques were surrounded by columns and arches, and eventually they were enclosed by great domes such as that at the Dome of the Rock in Jerusalem.

Drawing of the early mosque design.

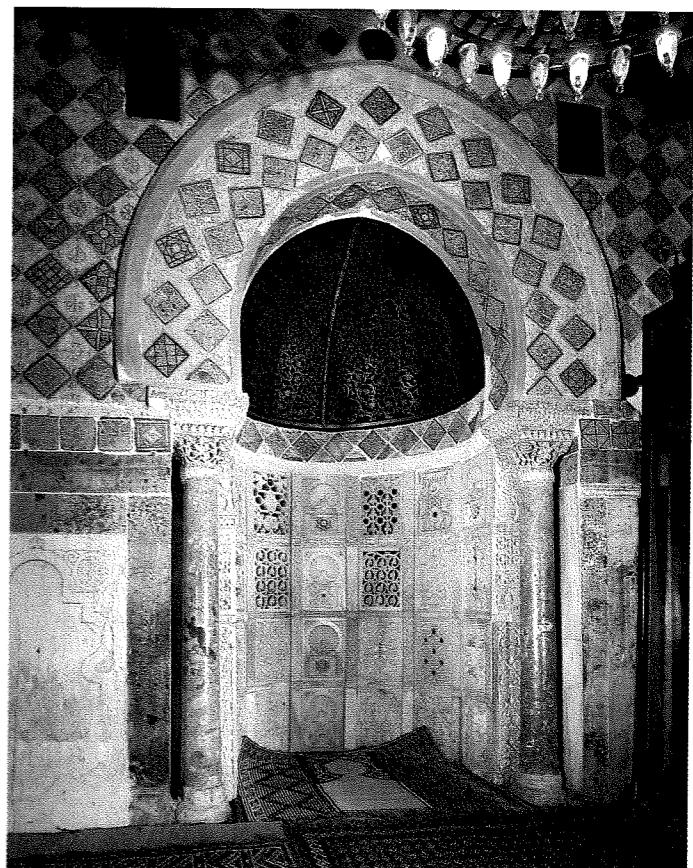

The first minarets, or towers from which the faithful were called to prayer, were added in the early 8th century and soon became a key feature of the mosque complex. As mosques grew larger and more architecturally refined, elaborate decoration in brightly colored ceramic tiles, semiprecious stones, and gold and silver filigree adorned their sides and domes. Because human and animal images were forbidden, geometric designs, passages from the Qur'an in swirling Arabic, and flower and plant motifs were favored. Nowhere were these decorations more splendid than in the mosques of Persia. Thus, in the early centuries of Islam, these great houses of worship became the focal points of Islamic cities, key places of community worship and socialization, and, with the schools that were often attached, vital intellectual and educational centers of the Islamic world.

QUESTIONS

- What do the design and decoration of Muslim mosques tell us about the Islamic view of a supreme being and the relationship between Allah and humans?
- Discuss the Christian and Jewish influences you detect in mosque design and the pattern of religious worship conducted there. What do you think is the significance of the lavish application of color and the frequent use of floral and plant motifs and Arabic verses from the Qur'an in the decoration of mosques through much of the Muslim world?

also made to hospitals, which in the numbers of their patients and the quality of their medical care surpassed those of any other civilization of that time.

The growth of Abbasid cities was also fed by a great increase in handicraft production. Both government-run and privately owned workshops expanded or were established to produce a wide range of products, from necessities such as furniture and carpets to luxury items such as glassware, jewelry, and tapestries. Although the artisans often were poorly paid and some worked in great

VISUALIZING THE PAST

The Mosque as a Mirror of Abbasid Era

FROM ONE END OF THE JEWELLED HALL, the towns and cities can be seen, and the minarets of the mosques rise above the five times daily. The mosque was the center of culture, the core of society, the early centers of learning, the fountains of the arts.

Living and ostentation soared to fantastic heights. In the Hall of the Tree, for example, there was a huge artificial tree, made entirely of gold and silver and filled with gold mechanical birds that chirped to keep the caliph in good cheer.

Because the tales were just that—tall tales—there is some exaggeration of the wealth, romantic exploits, and sexual excesses of the world depicted. But for some members of the elite classes, the luxuries, frivolities, and vices of the Abbasid age were very real. The following passages are taken from an English translation of *The Thousand and One Nights*. Each is selected to reveal a different facet of high society in the Abbasid era. The first, which describes the sumptuous interior of a mansion in Baghdad, indicates that conspicuous material consumption existed far beyond the palace.

They reached a spacious ground-floor hall, built with admirable skill and beautified with all manner of colors and carvings, with upper balconies and groined [sharply curved] arches and galleries and cupboards and recesses whose curtains hung before them. In the midst stood a great basin full of water surrounding a fine fountain, and at the upper end on the raised dais was a couch of juniper wood set with gems and pearls, with a canopy-like mosquito curtain of red satin-silk looped up with pearls as big as filberts [hazelnuts] and bigger.

In another tale, a fallen prince details the proper upbringing and education for a person of substance:

I am a king, son of a king, and was brought up like a prince. I learned intoning the Koran [Qur'an] according [to] the seven

The Mosque as a Mirror of Abbasid Era

schools and I read all manner [of] books, and held disputations on their contents with the doctors and men of science. Moreover, I studied star lore and the fair sayings of poets, and I exercised myself in all branches of learning until I surpassed the people of my time. My skill in calligraphy [writing, in this case Arabic and perhaps Persian] exceeded that of all of the scribes, and my fame was bruited abroad over all climes and cities, and all the kings learned to know my name.

In the following passage, a stylishly dressed woman from the elite classes is described in great detail:

There stood before him an honorable woman in a mantilla [veil] of Mosul silk broidered with gold and bordered with brocade [a rich cloth with a raised design, often of gold or silver]. Her walking shoes were also [broidered] with gold, and her hair floated in long plaits. She raised her face veil . . . showing two black eyes fringed with jetty lashes, whose glances were soft and languishing and whose perfect beauty was ever blandishing.

The woman leads a porter to a marketplace, which again reflects the opulence accessible to the rich and powerful of Abbasid society:

She stopped at the fruiter's shop and bought from him Shami apples and Osmani quinces and Omani peaches, and cucumbers of Nile growth, and Egyptian limes and Sultani oranges and citrons, besides Aleppine jasmine, scented myrtle berries, Damascene nenuphars [water lilies], flower of privit and camomile, blood-red anemones, violets, and pomegranate bloom, eglantine [wild rose], and narcissus, and set the whole in the porter's crate.

QUESTIONS

- What objects are key symbols of wealth in Abbasid society?
- What attainments are highly valued for upper-class men?
- What do they tell us about occupations and talents that brought high status in Abbasid society, and how do they compare with career aspirations in our own?
- In comparison, what attributes of women are stressed in these passages?

workshops, they were not slaves or drudge laborers. They owned their own tools and were often highly valued for their skills. The most accomplished of the artisans formed guildlike organizations, which negotiated wages and working conditions with the merchants and supported their members in times of financial difficulty or personal crisis.

In towns and the countryside, much of the unskilled labor was left to slaves, often attached to prominent families as domestic servants. Large numbers of slaves also served the caliphs and their highest advisors. It was possible for the more clever and ambitious slaves to rise to positions of great power, and many eventually were granted their freedom or were able to buy it. Less fortunate were the slaves forced into lives of hard labor under the overseer's whip on rural estates and government projects, such as those devoted to draining marshlands, or into a lifetime of labor in the nightmare conditions of the great salt mines in southern Iraq. Most of these drudge laborers were non-Muslims captured on slaving raids in east Africa.

In the countryside, a wealthy and deeply entrenched landed elite called the **ayan** emerged in the early decades of Abbasid rule. Many of these landlords had been long established. Others were newcomers: Arab soldiers who invested their share of the booty in land, or merchants and administrators who funneled their profits and kickbacks into sizeable estates. In many regions, most peasants did not own the land they worked. They occupied it as tenants, sharecroppers, or migrant laborers who were required to give the greater portion of the crops they harvested to the estate owners.

The First Flowering of Islamic Learning

In the first phase of Abbasid rule, the Islamic contribution to human artistic expression focused on the great mosques, such as those featured in the Visualizing the Past box, and great palaces. In addition to advances in religious, legal, and philosophical discourse, learning in the Muslim domains focused on the sciences and mathematics. In the early Abbasid period, the main tasks were recovering and preserving the learning of the ancient civilizations of the Mediterranean and Middle East. Beyond the works of Plato, for example, much of Greek learning had been lost to the peoples of western Europe. Thanks to Muslim and Jewish scholars, the priceless writings of the Greeks on key subjects such as medicine, algebra, geometry, astronomy, anatomy, and ethics were saved, recopied in Arabic, and dispersed throughout the empire. From Spain, Greek writings found their way into Christendom. Among the authors rescued in this manner were Aristotle, Galen, Hippocrates, Ptolemy, and Euclid.

In addition, scholars working in Arabic transmitted ideas that paralleled the rise of Arab traders and merchants as the carriers of goods and inventions. For example, Muslim invaders of south Asia soon learned of the Indian system of numbers. From India they were carried by Muslim scholars and merchants to the Middle Eastern centers of Islamic civilization. Eventually, the Indian numerical system was transmitted across the Mediterranean to Italy and from there to northern Europe. Along with Greek and Arab mathematics, Indian numbers later proved critical to the early modern Scientific Revolution in western Europe.
